

STRIP FAT... SCIENTIFICALLY.

AN INVESTMENT THAT LASTS A LIFETIME

The **GeneElite™ Body Fat Metabolism Test** is based on your own individual DNA. The results will be relevant throughout your entire life.

GeneElite™

The **GeneElite™ Body Fat Metabolism Test** is a cutting edge genetic test designed to profile genes associated with fat metabolism and insulin sensitivity. It gives you an understanding of how your own DNA dictates your body to metabolise fat.

Your genes are scientifically tested and analysed for variations which dictate your metabolic type. This information can assist you in understanding what types of exercise may be more suitable for your physiology when combined with a well balanced diet. The **GeneElite™ Body Fat Metabolism** test gives you invaluable knowledge about your individual makeup that will enable you to optimise your training program to address weaknesses and capitalise on strengths.

The **GeneElite™ Body Fat Metabolism Test** report gives you:

- An introduction to genetic profiling
- A results chart identifying your variations for the genes tested
- Results summary for body fat metabolism
- Instructions for analysing your results
- Fitness and lifestyle recommendations based on your individual results
- A description and the physiological relevance of each of the genes tested
- References for further reading
